

ROCKET
WATERPROOFING
WE SEAL THE DEAL

Zimbabwe

Company Profile

for Domestic & Industrial markets

DO IT ONCE. DO IT RIGHT!

Waterproofing is an essential part of a structure, building and home.

ABOUT US

We prioritise customer relationships and the ease of doing business to provide world-class, frictionless services. To do this, we hire exceptional staff who see their work not only as a job but also as a craft. We pride ourselves in operational excellence by providing the right product and services, at the right place and at the right time; in doing so we build lasting trust with our clients. Our vision is to grow our business and provide unprecedented efficiency and value to clients, ultimately making their lives easier.

Rocket Waterproofing provides a quality and recognized service in and around Zimbabwe by fixing, painting, installing and waterproofing:

- IBR roofs
- Pitched tiled roofs
- Corrugated roofs
- Flat concrete roofs
- Rising Damp on internal & external walls
- Windows & Door frames
- Balconies and Stairs
- Wetrooms and Saunas
- Ceilings and Water Features
- Foundations, Basements and Wine Cellars
- Expansion joints

OUR SERVICES

Rising Damp

Rising Damp is becoming an increasing problem throughout Zimbabwe in both existing and new properties. Heavy rainfall, rising ground water level as well as deep excavations for new developments, have changed the course of water in the ground, causing many previously dry ground areas to flood and have damp problems.

In aging properties, rising damp is caused when a damp proofing course has either failed or become ineffective over time. Unfortunately, rising damp can never be cured, but it can be controlled. If rising damp or any form of damp is left untreated, further damage could spread to interior floors and walls, resulting in major expensive repair work. That is why you should always turn to our expert team when you encounter damp.

There are many processes and materials involved when it comes to fixing rising damp due to differences in building structures. This can involve injecting or waterproofing directly onto the bricks, and it can also involve waterproofing by a torchon system. Designing the right system requires careful consideration of all the factors including the type of structure and history of ground water issues, its uses and location. Whether you have a new development or any existing property, we will work with you to ensure the right solution.

Windows and Door Frames

Modern architectural trends are opening spaces that were traditionally separated by walls. This also means that door and window space has increased allowing us to admire the outdoors from inside. Window and door frames are installed and held in place with plaster.

Plaster meets the frames of the windows & doors and over time the plaster starts pulling away from the frames forming a crack for water to seep in.

When it comes to waterproofing windows and door frames you can not cut corners! We have seen many examples of failures due to poor installation or incorrect use of products. Often these failures lead to a lot of disruption and high costs for reinstatement and damage.

Wetrooms and Saunas

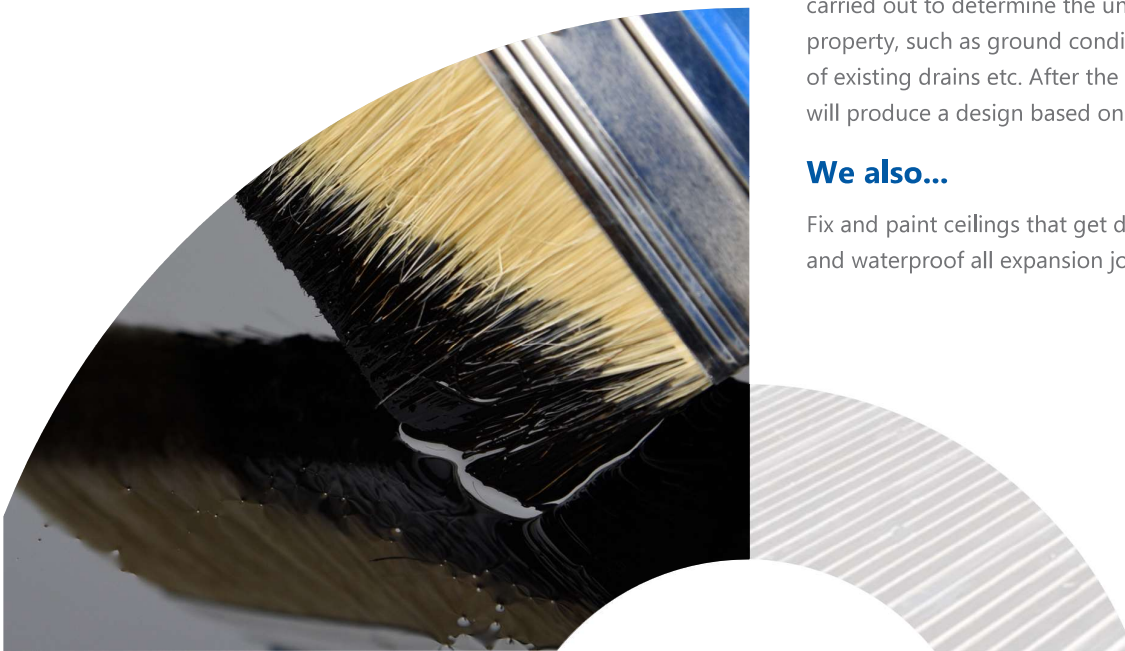

A bathroom, as we know, is no more just a washroom, rather it has become a space to renew, refresh and re-energise yourself. Waterproofing allows such rejuvenation by helping you to keep the wet room dry, airy and appealing! Provide protection, and peace of mind, behind your shower walls and other areas subject to moisture.

Foundations, Basements and Wine Cellars

Installing a robust basement waterproofing system is vitally important for protecting the structure against water ingress. Before any work begins, a full site investigation survey is carried out to determine the unique particularities of the property, such as ground conditions, future risks and the location of existing drains etc. After the inspection Rocket Waterproofing will produce a design based on the site survey findings.

We also...

Fix and paint ceilings that get damaged from leaks and waterproof all expansion joints.

OUR SERVICES

ROOFING

If roof waterproofing is needed, we conduct a free on-site assessment and roof audit to understand the full scope of needs. We guarantee work on the following roof types:

- IBR roofs
- Corrugated roofs
- Pitched tiled roofs
- Flat concrete roofs

Designing the right system requires careful consideration of all the factors including the type of structure and history of the structure. Whether you have a new development or an existing property, we will work with you to ensure the right solution.

When it comes to waterproofing roofs, you can not cut corners! We have seen many examples of failures due to inadequate design, poor installation or incorrect use of products. Often these failures lead to lot of disruption and high costs for reinstatement and damage.

IBR & Corrugated Roofs

IBR Roofs on individual and domestic roofs do leak after some time. The bolts rust and water gets into the overlaps and flashing, for both existing and newly built properties.

We use only the best waterproofing products for IBR and corrugated roofs. When it comes to flat IBR & corrugated roofs the best option is to do a boarding system. This is when we apply a bitumen torchon on top of the IBR & corrugated roofing. For this we provide a **10 year Guarantee**

Pitched tile roofs

Pitched tile roofs are becoming an increasing problem throughout many parts of Zimbabwe for both existing and new properties due to heavy rainfall, lack of maintenance and incorrect installations. We have seen many examples of failures due to inadequate design, poor installation or incorrect use of products.

Flat concrete roofs & Roof Gardens

Rocket Waterproofing are approved contractors for several flat roof waterproofing products, covering reinforced liquid waterproofing systems.
